SUBJECT INDEX

Algorithms
to improve selectivity of thermally-cycled Sn oxide gas sensors, 333
Aluminum
mixed oxide Al_2O_3–V_2O_5 as semiconductor gas sensor for NO and NO_2, 259
Ammonia sensitivity
of Pd–Ir alloy-gate MOS field-effect transistor, 177
Automotive sensors
development process for, 415

Biosensor
versatile thermal, 53
Bismuth
gas-sensing properties of sintered Bi Fe molybdate catalyst, 351

Cadmium telluride
β-ray detector, 227
Calorimetric sensor
thick-film, for monitoring concentration of combustible gases, 237
Capacitance measuring circuit characterization of humidity sensor that incorporates CMOS, 371
Ceramics
porosity control of humidity-sensitive, and theoretical model of humidity-sensitive characteristics, 61
temperature–humidity–gas multifunctional sensitive, 71
Chemical sensor
for NO_2, preliminary results with Si-based surface acoustic wave, 385
CMOS
capacitance measuring circuit, characterization of humidity sensor that incorporates, 371
Combustible gases
thick-film calorimetric sensor for monitoring concentration of, 237
Combustion flame
sensor for detecting stoichiometric composition in, 393

Conducting polymer gas sensors
fabrication and characterization, 125
response of polypyrrole to methanol vapour, 141

Electrical and spectroscopic studies
comparative, to optimize O_2 and NO_2 sensing; lead phthalocyanine (PbPc) as prototype organic material for gas sensors, 159
Electrochemical oxygen sensor
solid polymer electrolyte-based, 33
Electronic effects
of different atmospheres on SnO_2, infrared study of surface chemistry and, 151
Electron tunneling sensor, 201
Etch-stop structures
formation of, utilizing ion-beam synthesized buried oxide and nitride layers in Si, 183

Fabrication
and characterization; conducting polymer gas sensors, 125
of micromechanical structures, new approach for, 289
Fiber optic displacement probe
for structural power flow measurements, dual-channel, 311
Fibre-optic pressure sensor
in Si, based on fluorescence decay, 327
Flow injection titration system
pH-ISFET as detector in, 41
Flow velocity
integrated multi-function sensor for, temperature and vacuum measurements, 3
Fluorescence decay
fibre-optic pressure sensor in Si based on, 327

Gas
temperature–humidity–, multifunctional sensitive ceramics, 71
Gas-sensing properties
of sintered Bi Fe molybdate catalyst, 351

© Elsevier Sequoia/Printed in The Netherlands

Gas sensor(s)
conducting polymer
fabrication and characterization, 125
response of polypyrrole to methanol vapour, 141
lead phthalocyanine (PbPc) as prototype organic material for; comparative electrical and spectroscopic studies to optimize O_2 and NO_2 sensing, 159
mixed oxide Al_2O_3–V_2O_5 as semiconductor, for NO and NO_2, 259
thermally-cycled Sn oxide, algorithms to improve selectivity of, 333
Gas turbine engines
development of optical fibre thermometer for, 105
Gauge factors
very high strain sensitivity in thick-film resistors; real and false, 401

Humidity
temperature–, –gas multifunctional sensitive ceramics, 71
Humidity-sensitive ceramics
porosity control of, and theoretical model of humidity-sensitive characteristics, 61
Humidity sensor
that incorporates CMOS capacitance measuring circuit, characterization of, 371
Hydrogen sensing
infrared study of, at 300 K using M/ZnO systems, 119

Infrared study
of H_2 sensing at 300 K using M/ZnO systems, 119
of surface chemistry and electronic effects of different atmospheres on SnO_2, 151
Iridium
Pd–Ir alloy-gate MOS field-effect transistor, ammonia sensitivity of, 177
Iron
gas-sensing properties of sintered Bi Fe molybdate catalyst, 351

Lead phthalocyanine (PbPc)
as prototype organic material for gas sensors; comparative electrical and spectroscopic studies to optimize O_2 and NO_2 sensing, 159

Magnetic field sensing
with magnetostrictive materials using tunneling tip detector, 211
Magnetostrictive materials
magnetic field sensing with, using tunneling tip detector, 211
Methanol vapour
response of polypyrrole to; conducting polymer gas sensors, 141
Micromechanical structures
new approach for fabrication of, 289
Micromechanical systems
microrobots and, 267
Microrobots
and micromechanical systems, 267
MOSFET
ammonia sensitivity of Pd–Ir alloy-gate, 177
Multifunctional sensitive ceramics
temperature–humidity–gas, 71
Multi-function sensor
integrated, for flow velocity, temperature and vacuum measurements, 3

Nickel films
reflectivity changes of optically-thin, exposed to oxygen, 249
Nitrogen dioxide
Si-based surface acoustic wave chemical sensor for, preliminary results with, 385
Nitrogen dioxide sensing
lead phthalocyanine (PbPc) as prototype organic material for gas sensors; comparative electrical and spectroscopic studies to optimize O_2 and NO_2 sensing, 159
Nitrogen oxides
mixed oxide Al_2O_3–V_2O_5 as semiconductor gas sensor for NO and NO_2, 259

Optical fibre thermometer
for gas turbine engines, development of, 105
Organic material
lead phthalocyanine (PbPc) as prototype, for gas sensors; comparative electrical and spectroscopic studies to optimize O_2 and NO_2 sensing, 159
Oxide and nitride layers
in Si, formation of etch-stop structures utilizing ion-beam synthesized buried, 183

Oxygen
reflectivity changes of optically-thin Ni films exposed to, 249
Oxygen sensing
lead phthalocyanine (PbPc) as prototype organic material for gas sensors; comparative electrical and spectroscopic studies to optimize O_2 and NO_2 sensing, 159
Oxygen sensor
solid polymer electrolyte-based electrochemical, 33

Palladium
–Ir alloy-gate MOS field-effect transistor, ammonia sensitivity of, 177
pH-ISFET
used as detector in flow injection titration system, 41
Photoelectrical tilt sensor, 95
Piezoelectric crystal detector system
coated, with high stability, 85
Piezoresistive pressure transducers
signal superimposition of, 23
Polypyrrole
response of, to methanol vapour; conducting polymer gas sensors, 141
Porosity control
of humidity-sensitive ceramics and theoretical model of humidity-sensitive characteristics, 61
Power flow measurements
dual-channel fibre optic displacement probe for structural, 311
Pressure sensor
fibre-optic, in Si based on fluorescence decay, 327
Pressure transducer(s)
new sputtered amorphous thin-film, 13
signal superimposition of piezoresistive, 23

β-Ray detector
Cd telluride, 227
Reflectivity changes
of optically-thin Ni films exposed to oxygen, 249
Resistors
very high strain sensitivity in thick-film; real and false super gauge factors, 401

Signal superimposition
of piezoresistive pressure transducers, 23
Silicon
fibre-optic pressure sensor in, based on fluorescence decay, 327
formation of etch-stop structures utilizing ion-beam synthesized buried oxide and nitride layers in, 183
preliminary results with Si-based surface acoustic wave chemical sensor for NO_2, 385
Stability
coated piezoelectric crystal detector system with high, 85
Stoichiometric composition
in combustion flame, sensor for detecting, 393
Strain sensitivity
very high, in thick-film resistors; real and false super gauge factors, 401
Structural power flow measurements
dual-channel fiber optic displacement probe for, 311
Surface acoustic wave chemical sensor
for NO_2, preliminary results with Si-based, 385
Surface chemistry
infrared study of, and electronic effects of different atmospheres on SnO_2, 151

Temperature
–humidity–gas multifunctional sensitive ceramics, 71
integrated multi-function sensor for flow velocity, and vacuum measurements, 3
Thermal biosensor
versatile, 53
Thermometer
development of optical fibre, for gas turbine engines, 105
Tilt sensor
photoelectrical, 95
Tin dioxide
infrared study of surface chemistry and electronic effects of different atmospheres on, 151
Tin oxide
gas sensors, algorithms to improve selectivity of thermally-cycled, 333

Titration system
pH-ISFET used as detector in flow injection, 41
Transducer(s)
pressure,
new sputtered amorphous thin-film, 13
signal superimposition of piezo-resistive, 23
Tunneling sensor
electron, 201
Tunneling tip detector
magnetic field sensing with magneto-strictive materials using, 211
Vacuum
integrated multi-function sensor for flow velocity, temperature and, measurements, 3
Vanadium
mixed oxide Al_2O_3–V_2O_5 as semi-conductor gas sensor for NO and NO_2, 259
Zinc
infrared study of H_2 sensing at 300 K using M/ZnO systems, 119
